

Vantage™ Module for BlackBerry

Managing BlackBerry for Compliance and Security

PRODUCT DATA SHEET

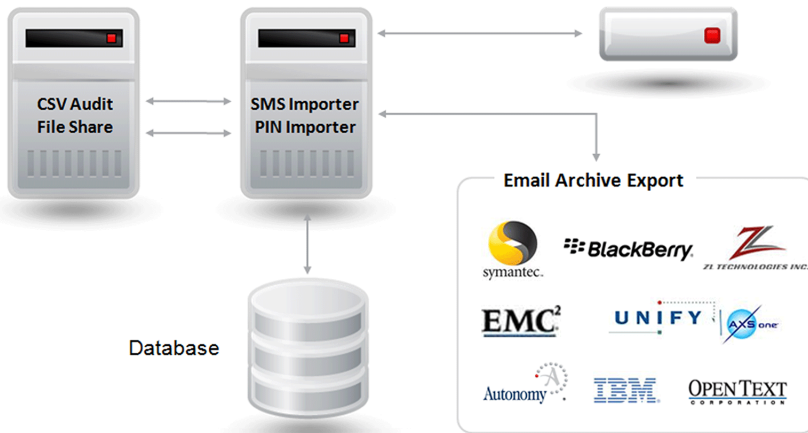

Risks of BlackBerry Usage in Today's Real-Time Enterprise

With respect to communications devices for businesspersons, BlackBerry oftentimes comes to mind. It is the communications device of choice for many

that rely on real-time information transfer to keep their business running or to close the next deal. Because BlackBerry communications are all classified as “electronic communications” for the purposes of data protection, eDiscovery, and other compliance-related requirements, being able to store and review PIN and SMS content is crucial.

Additionally, when evaluated in the context of all real-time communications modalities, the challenge of remaining compliant becomes more pronounced. Between unified communications platforms, public instant messaging (IM) networks, and industry-specific networks, it is often difficult to manage such a wide variety of communications channels.

The Actiance Advantage

Actiance provides a comprehensive solution to managing and securing the use of BlackBerry devices and other real-time communication applications within the enterprise.

Vantage™ provides granular security, compliance, and policy controls for unified communications platforms, such as Microsoft OCS, Microsoft Lync, and IBM Lotus Sametime, alongside publicly available IM networks, Web conferencing, and industry-focused IM communities such as Thomson Reuters Messenger, Bloomberg, and YellowJacket. Vantage is designed to meet an organization's security, management, and compliance requirements for real-time communications, in addition to supporting all the key government and industry regulations (e.g., FISMA, FINRA, SEC, FRCP, Sarbanes-Oxley, MiFID, FERC).

AT A GLANCE

Vantage Module for BlackBerry enables the safe and compliant use of BlackBerry devices by logging all SMS and/or PIN messages and securely storing the messages in a database. Coupled with the base Actiance Vantage platform, the two together enable organizations to detect, secure, and manage real-time collaborative applications while blocking malware, minimizing information leakage, and controlling employee Internet use.

KEY FEATURES

- Log PIN and SMS messages to CSV files
- Review and export SMS and PIN messages
- Match SMS and PIN identities to employees' corporate IDs
- Automap identities to employees if not previously known
- Store messages securely in database
- Group messages into “conversations” based on the participants involved
- Integrate with Actiance Vantage (i.e., Vantage auto-imports the CSV files)
