

Social Software for the Enterprise: IBM Connections

IBM Connections is social software for business. It empowers business professionals to develop, nurture, and remain in contact with a network of their colleagues; respond quickly to business opportunities by calling upon the expertise in their network; and discuss and refine new creative ideas with communities of co-workers, partners, and customers.

The Need for Compliance and Granular Controls

Enterprises are facing heightened regulatory, eDiscovery, and compliance requirements, including logging and archiving all content, preventing data leakage, and enforcing corporate usage policies across all applications, including social software. Additionally, businesses increasingly require role-based access control and management at global, group, and user levels.

Actiance Vantage™ Compliance Module for IBM Connections

Actiance's Vantage for IBM Connections provides security, management, and compliance for enterprise social collaboration. Its policy framework allows granular policies to be defined between groups of employees, ensuring enterprises remain compliant. All of the available compliance controls were designed to help address the key government and industry regulations (e.g., FISMA, FINRA, SEC, FRCP, Sarbanes-Oxley, MiFID, and FERC).

AT A GLANCE

Vantage Compliance Module for IBM Connections provides granular policy controls, content inspection, logging, and archiving for IBM's social software for businesses, IBM Connections, helping to meet regulatory, industry and government compliance requirements
