

## Vantage™

Compliance and Security for  
Today's Social Business

### Manage and secure Enterprise social, IM, UC and networks.

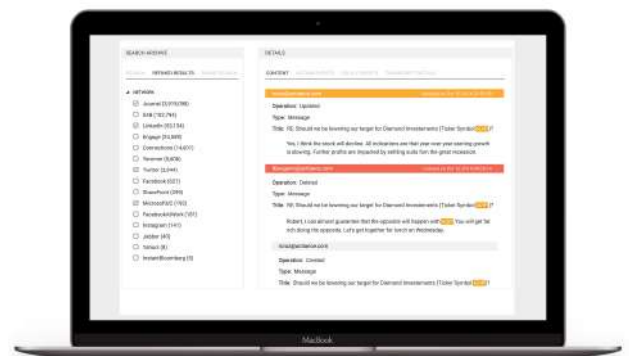

Organizations today are faced with numerous communications and collaboration tools. Many are standardizing on multi-featured platforms like Microsoft Skype for Business, while others continue to use a variety of tools across business units and functions, such as, Slack, Yammer, and Bloomberg. However, with each channel comes a unique set of challenges that can introduce security, compliance, and information management risks that result in regulatory fines, loss of sensitive information, and damage to your brand.

Vantage addresses these challenges by enabling you to:

- Capture and control unified communications, messaging, and industry-specific communications networks in real-time
- Enforce communications boundaries and ethical walls
- Secure communications and protect sensitive information by enforcing Data Loss Prevention policies
- Enforce policies to comply with FINRA, SEC, HIPAA, FDA and other regulations
- Enable real-time moderation of regulated users
- Protect each channel against cybersecurity threats
- Defensibly deliver content to archives like Actiance Alcatraz

### Key Features

- Capture and secure content with full conversational context
- Forensically-sound data collection in its native format
- Active Compliance™ for real-time protection and alerts
- Policy enforcement across all channels including blocking, ethical walls, federation, and feature controls

# Vantage™

*“Actiance is well-established and has a long track record in the capture and archive of a variety of communication data”*

- Gartner

## Impactful Benefits

- **Unify compliance:** address regulatory, legal, and governance requirements across all social channels
- **Reduce risk:** stress-free, real-time compliance and data security controls
- **Advanced review:** improve review effectiveness with capture of full conversational context
- **Future-proof extensibility:** easily consume and control new social content sources
- **Reduce cost and inefficiency:** manage and control disparate communications channels through one system

## Additional Features

- Support for a comprehensive set of networks including Microsoft Skype for Business, Yammer, and SharePoint; Cisco Jabber, IBM Sametime, Salesforce Chatter, Symphony, and other industry networks
- Unified identity management across all networks
- Granular policy controls that can be set at user, group, or company levels – customizable at any time
- Security controls including Data Loss Prevention, malware protection, and Zero Day WORM blocking
- Secure delivery of all content and metadata to archiving, review, or analytics tools
- Support for on-premises and multi-tenant cloud deployment

## Actiance Vantage

Actiance’s Vantage capture and compliance platform, helps organizations secure and manage enterprise data and information flow by capturing, managing, and preserving content from across 80+ communications channels and growing. Vantage captures content and information flow in real-time and enables compliance teams to detect sensitive data, threats, or information leaks as they happen, in transit and at rest. Vantage enables users to set granular policies to block, monitor, or be notified of information flow based on each organization’s unique rules.
