

Vantage™ for Microsoft Teams

Compliant chat-based workspace

Key Features

- **Compliant Content Capture**
Capture, index, and search Teams content from one-to-one chats, multi-party chat, and Team Persistent channels, including messages (plus edits and replies), emojis, GIFs, files, and links
- **Content Monitoring**
Define lexicons to flag content in text and in files, which can be targeted to specific groups. Alerts can then be sent based upon keyword or phrase matches
- **Native File Capture**
Capture files uploaded into Teams in their original format, regardless of a user's device, location, or network
- **Powerful Search**
Search for Teams content based on user, date range, keywords, or content tagged to specific cases, events, or topics
- **Export to Alcatraz and Legacy Email Archives**
Seamless export to Alcatraz or legacy email archives for supervision and eDiscovery

Collaborate compliantly.

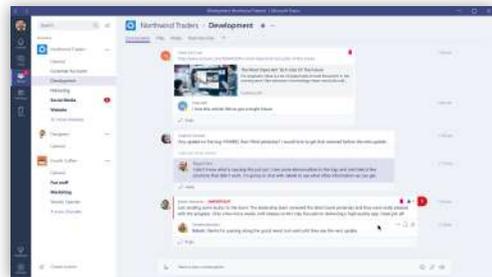

Adoption of Microsoft Teams is growing fast, powered by instant access to everything you need right in Office 365. All your content, tools, people, and conversations are available in the team workspace, including built-in access to SharePoint, OneDrive, and Skype for Business. For regulated firms, however, use of such rich communications can open firms up to risk. Regulated firms must follow strict compliance and records retention requirements mandated by the SEC, FDA, FINRA, HIPAA and others.

Monitor Teams to protect your business.

Actiance Vantage for Teams provides near-real-time capture of one-to-one, one-to-many and persistent conversations while inspecting content to minimize potential data loss and mitigate compliance issues and policy violations.

Reduce eDiscovery & supervisory complexity.

Vantage for Teams captures Teams content in its native format along with tags to related content to provide a complete view of activities that can then be retained in Actiance Alcatraz for easy and efficient eDiscovery. Full supervision capabilities include an audit trail that tracks review sessions, actions taken on specific messages, and routes Teams messages to supervisors for further reviews.
